PROFILE

SRE / DevOps Engineer with 13+ years of experience across production engineering, QA, release management and cloud-native delivery. Strong background in Kubernetes, GitOps, observability and production troubleshooting, combined with deep experience in quality assurance and distributed teams.

Experienced in investigating production issues, improving operational visibility, supporting releases and collaborating with engineering, product, delivery and client-facing stakeholders.

Detailed-oriented, hard-working and enthusiastic. Passionate and committed to the quality of product and with excellent investigation skills.

Background in release procedures, regression risk control and quality gates across backend, mobile and frontend systems.

CORE SKILLS

Kubernetes, k9s, Helm, Docker	Terraform, GitOps, GitHub actions, Flux, Argo CD
GCP, AWS, Azure, Oracle Cloud, Vercel, Cloudflare	Grafana, Kibana, PMM, Sentry, Coralogix
Linux administration	Incident investigation, release readiness, production support
Python, Bash, Go, SQL, Java, C++, REST APIs	MySQL, Redis, BigQuery
Jenkins, CircleCI, Git, GitHub, Bitbucket	Jira, Redmine, Trello, Agile/Scrum/Kanban

PROFESSIONAL EXPERIENCE

DevOps & SRE | IT Outposts

2024 - Present

- Operate production Kubernetes platforms across client projects (kubect!, k9s, Helm) - frontend skin applications, backend API services, microservices and web applications across production, staging and development environments.
- Manage the ingress and traffic layer - Cloudflare, Traefik, Nginx, Varnish, reverse proxies and ingress controllers inside the cluster - with HPA-driven autoscaling, CoreDNS and Flannel cluster add-ons; tune container resources based on observed load and SLO targets.
- Maintain Terraform modules; drive reproducible environment changes via GitOps with Argo CD/Flux, with Helm charts and environment-specific manifests.
- Build and maintain CI/CD pipelines that automate build, test, deployment and release workflows; support deployment validation, rollback procedures and post-deployment checks across environments.
- Provisioned and administered production MySQL databases - managed users and access grants, and set up a dedicated bastion host for secure database connectivity from operator workstations and application services.
- Maintain observability and alerting: Prometheus rules (uptime, custom and node-monitoring), Grafana dashboards covering technical and business metrics (request rate, latency, errors, availability, resource usage, order-related metrics), PMM for MySQL, Uptime Kuma synthetic checks and Sentry.
- Lead production incident response - high latency, node readiness, container OOM/CPU pressure, routing and ingress issues - and drive remediation, root-cause analysis and postmortems with engineering and product teams.
- Maintain Kubernetes RBAC, namespace boundaries and secrets handling; secure operator access via Bastion and SSH key management; keep production, staging and development environments consistent via standardized configuration.
- Collaborate across cloud platforms (OCI, GCP, AWS, Azure, Vercel, Cloudflare) and with engineering, product and delivery stakeholders to improve deployment reliability, operational visibility and recurrence prevention.

Manual & Automation QA Engineer | Moon Active

2019 - 2024 | Gaming Company

- Performed functional, integration and regression testing for Android/iOS mobile games and backend services.
- Wrote and proposed Java-based integration tests for backend features and API behavior.
- Conducted release procedures for iOS, Android and backend components, supporting production readiness.
- Investigated backend issues, prepared clear bug reports and worked closely with developers, DevOps, Delivery and Product teams.
- Created test cases, instructions and QA documentation for complex product areas.
- Worked in distributed teams across Ukraine, Poland and Romania.

Production Engineer & QA | Star

2015 - 2019 | SaaS Company

- Monitored system health and production performance using Grafana, Kibana and Coralogix.
- Investigated production incidents, debugged issues and suggested technical solutions for production defects.
- Verified production fixes before deployment and supported safe release execution.
- Wrote Python-based integration tests for backend client-server and API scenarios.

Manual QA Engineer | SECL Group, Manual QA Engineer & Content Manager | Diaries Lifebook

2012 - 2015 | SaaS Company

EDUCATION

BSc in Computer Science, National Technical University of Ukraine, Kyiv Polytechnic Institute, 2006 - 2010

LANGUAGES

Hebrew, English, Russian, Ukrainian, Italian
