PROFILE

DevOps Engineer with 14+ years of experience across production engineering, Automation & Manual QA, release management and cloud-native delivery. Strong background in Kubernetes, GitOps, observability and production troubleshooting, combined with deep experience in quality assurance and distributed teams.

Experienced in investigating production issues, improving operational visibility, supporting releases and collaborating with engineering, product, delivery and stakeholders.

Detailed-oriented, hard-working and enthusiastic. Passionate and committed to the quality of product and with excellent investigation skills.

Background in release procedures, regression risk control and quality gates across backend, mobile and frontend systems.

LIVE CLOUD & DEVOPS PORTFOLIO

Platform Architecture infra.1ms.my	Project on Kubernetes in Oracle Cloud (OCI): OKE, Flux GitOps, GitHub Actions, OCIR image automation, Cloudflare Tunnel/Envoy Gateway, External Secrets + OCI Vault and observability on Grafana, Alloy, Prometheus, Loki. Built and deployed AI Agent (Gemini) for LLM orchestration (LangChain, LangGraph) that interact with cloud APIs to automate cluster operational tasks
URL shortener 1ms.my	Link shortener with Go backend (writer/reader split), nginx frontend and Oracle Autonomous JSON DB; deployed to Kubernetes through GitOps; flux, GitHub actions
Password Generator pwd.1ms.my	Client-side cryptographic password generator; deployed to Kubernetes through GitOps; flux, GitHub actions
CV Online Version cv.1ms.my	My public CV with downloadable PDF; deployed to Kubernetes through GitOps; flux, GitHub actions

CORE SKILLS

AWS, GCP, Azure, Oracle Cloud, Vercel, Neon	Terraform, GitOps, GitHub actions, Flux, Argo CD, release gates
Kubernetes, k9s, Helm, Docker, Deployments, Ingress	Cloudflare, WAF, RBAC, External Secrets, Vault
Git, GitHub, Bitbucket, GitLab	Grafana, Alloy, Prometheus, Loki, PMM, Sentry, Uptime Kuma, alerting
RabbitMQ, Nginx, Envoy, Traefik	MySQL, PostgreSQL, BigQuery, Redis, DynamoDB, Oracle NoSQL
Linux administration, bastion	Incident investigation, release readiness, production support
Python, Bash, Go, SQL, Java, C++, REST APIs	Release management, delivery management, Agile/Scrum/Kanban

PROFESSIONAL EXPERIENCE

DevOps Engineer | IT Outposts

2024 - Present

- Operate production Kubernetes platforms across client projects, covering frontend skin applications, backend API services, microservices and web applications in production, staging and development environments
- Manage ingress and traffic layers with Cloudflare, Traefik, Nginx, Varnish, reverse proxies and ingress controllers; support HPA autoscaling and resource tuning based on observed load and SLO targets
- Maintain Terraform modules and reproducible environment changes using GitOps with Argo CD/Flux, Helm charts and environment-specific manifests
- Build and maintain CI/CD pipelines for build, test, deployment and release workflows, including deployment validation, rollback procedures and post-deployment checks
- Provision and administer production MySQL access, including users, grants and secure bastion connectivity from operator workstations and application services
- Maintain observability and alerting: Prometheus rules, Grafana dashboards for technical and business metrics, PMM for MySQL, Uptime Kuma synthetic checks and Sentry
- Lead production incident investigation for latency, node readiness, OOM/CPU pressure, routing and ingress issues; coordinate remediation, root-cause analysis and postmortems with engineering and product teams
- Maintain Kubernetes RBAC, namespace boundaries, secrets handling, bastion/SSH access and consistency across production, staging and development environments
- Collaborate across cloud platforms (OCI, GCP, AWS, Azure, Vercel, Cloudflare) and with engineering, product and delivery stakeholders to improve deployment reliability, operational visibility and recurrence prevention

Manual & Automation QA Engineer | Moon Active

2019 - 2024 | Gaming Company

- Owned QA strategy and delivery quality for a core feature of a large-scale game application, covering iOS/Android mobile application, backend services and API flows
- Worked closely with Product Manager on requirements review, acceptance criteria, ticket prioritization, risk assessment and release readiness.
- Led daily feature/team syncs, coordinated QA tasks and helped prioritize defects, automation coverage and production-risk scenarios
- Performed functional, integration and regression testing for mobile and backend components; investigated production issues, reproduced defects and provided clear technical bug reports
- Wrote and proposed Java-based integration tests for backend features and API behavior; coordinated priorities for automated test coverage.
- Validated statistical and data-science scenarios, backend-driven product logic, data flows and edge cases
- Used Charles Proxy and Postman to inspect network calls, debug API behavior and validate client-server interactions
- Acted as Scrum Master during early phases of a new project: led daily meetings, retrospectives, sprint status communication and process improvements
- Worked in distributed teams across Ukraine, Poland and Romania
- Created test cases, instructions and QA documentation for complex product areas
- Conducted release procedures for iOS, Android and backend components, supporting production readiness
- Investigated backend issues, prepared clear bug reports and worked closely with developers, DevOps, Delivery and Product teams

DevOps Engineer & SRE | Star

2017 - 2019 | SaaS Company

- Supported production operations for an AWS-hosted mobile/backend platform, monitoring service health, availability and performance with Grafana, Kibana and Coralix
- Investigated production incidents and customer-reported issues using logs, dashboards, API behavior and reproduction flows; identified root causes and coordinated fixes with Engineering and DevOps
- Supported release execution and deployment readiness for iOS, Android, backend and frontend; verified fixes in staging/production and performed post-release validation
- Wrote Python-based integration tests for backend client-server and API scenarios to protect critical integrations and reduce regression risk
- Worked across application logs, service dependencies, API flows and 3rd-party integrations to improve operational visibility and reduce recurring production issues
- Documented troubleshooting steps, release procedures and recurring-issue patterns; collaborated with Project Manager, Product Manager, DevOps, QAs, clients and distributed engineering teams
- Acted as an escalation point for client-reported user issues, troubleshooting and applying direct production-database fixes to resolve account-level problems

QA Engineer & Scrum Master | Star

2015 - 2017 | SaaS Company

- Led functional, integration and regression testing for iOS/Android mobile applications, backend services and frontend web components
- Planned and managed QA activities, created test cases, bug reports, instructions, release documentation and risk-based test coverage
- Served as Scrum Master for a 7-member team: led stand-ups, sprint planning, retrospectives, sprint-status reporting and team process improvements
- Managed and mentored 3 QA engineers, coordinated QA priorities and maintained delivery quality for mobile/backend releases
- Presented iOS/Android demos and delivered technical support to customers and stakeholders in USA, UK and Germany; worked in distributed teams across Kyiv, Beijing, San Francisco, Poland, China and Ukraine

Manual QA Engineer | SECL Group, Manual QA Engineer | Diaries Lifebook

2012 - 2015 | SaaS Company

- Performed manual testing for SaaS/web products, including test cases, bug reports, regression validation and collaboration with development teams
- Supported product/content validation workflows, QA documentation and cross-functional communication for SaaS product delivery

EDUCATION

BSc in Computer Science, National Technical University of Ukraine, Kyiv Polytechnic Institute

LANGUAGES

Hebrew, English, Russian, Ukrainian, Italian
